(54) Title: SYSTEM AND METHOD FOR TIME BASED DIGITAL CONTENT ACCESS

(57) Abstract: A content reproduction control system (1) comprising a server apparatus (101b) and a terminal apparatus (102) that are connected via a communication path (103), wherein the server apparatus includes: based on time information attached to a content, a control information generation unit (1106) operable to generate control information (1503) for specifying a range for permitting or prohibiting a user's predetermined operation in the terminal apparatus; and a distribution unit (1110) that distributes the control information to the terminal apparatus (102), the terminal apparatus includes: a content use unit (2108) operable to use the content; a receiving unit (2101) operable to receive the control information; and a content use control unit (2106) operable to control reproduction of the content based on the received control information.
